To, Chief Financial Officer, Prudential Sugar Corporation Limited 144, 4th Floor, Akash Ganga, Srinagar Colony, Hyderabad, Telangana - 500 073

Subject – Reply to the clarification sought on report on Floor Price for Preferential Allotment of Equity Shares ('Shares') of Prudential Sugar Corporation Limited ("PSCL") calculated in accordance with Securities Exchange Board of India (Issue of Capital and Disclosure Requirements) Regulations, 2018 vide valuation report dated September 18, 2024.

Dear Sir,

Kindly refer to point wise reply to the clarification sought as per the captioned subject –

1. It has been observed that the Income Approach has not been considered to derive the value. Kindly clarify the same.

As informed during the valuation exercise, the Company was originally engaged in sugar manufacturing at its facility in Chittoor, AP. However, the company had sold its business including the assets and is now planning to enter new ventures, primarily in the manufacturing of agri-based products, either by establishing a new facility or acquiring an existing one. It is also exploring joint ventures in other profitable sectors. Recently, company is not engaged in trading activity which mainly consists of Sugar Trading. It is further observed that, since past 3-4 years, substantial part of company earnings are from interest income from the loans & advances (already considered at fair value in NAV approach) provided by the company. Refer Annexure A for the detailed information on Historical Consolidated Profit & Loss Statement.

Due to following reasons we have not considered Income Approach –

- a. Lack of business operations
- b. Company was carrying trading business of sugar & agriculture commodities which are highly dependent on external factors like market demand and government regulations, and significant price fluctuations in agricultural commodities. Additionally, the short & seasonal business cycles, high market risks, and inconsistent historical data make reliable cash flow forecasting challenging. Thus, application of Discounted Cash Flow or Earnings capitalization method is infructuous.

As there is no business activity being carried out, we have relied on alternative approaches such as the Market or Cost Approach are more suitable for this valuation

2. It has been observed that in the Valuation Report undertaken, the weights are not assigned to all the Approaches considered to derive the value of shares for the current issue. Kindly clarify the same.

In addition to above explanation, we have considered all the valuation approaches & assigned the weightages as follows -

Valuation Approach	Valuation Method	Estimated Fair Value of	Weightage
		Equity Share	
		[Rs/Equity]	
Asset Approach	Net Asset Value	28.25	50%
Market Approach	Actively Traded Market	32.14	50%
	Price	2.5	
Income Approach	Not considered due to	NA	0%
	reasons provided in		€- <sub>100</sub>
	explanation above	*	
	Estimated Weighted	30.20	
	Fair Value of Equity		
x *1	Share [Rs/Equity]		

## Rationale -

- a. Under Asset Approach We have considered consolidated financial statements as on March 31, 2024 being latest available audited financial statements of the company. We have relied on book value of all the assets and liabilities except for the value of the buildings. We have relied on valuation report by Registered Valuer for Building dated 30/08/2024. Accordingly, to arrive at net asset value of the company we have replaced book value of the buildings, with estimated fair value as per the registered valuer report for buildings.
- b. Under Market Approach
  - i. We undertook a process to identify comparable companies with similar business nature, operational scale, and risk exposure. However, the companies identified were not suitable for valuation purposes due to several factors, including diversified business operations, lack of available data as of the valuation date, negative earnings, significant differences in operational scale, and divergent product lines and risk profiles. Given the absence of reliable and comparable company data as of the valuation date, the Comparable Company Multiple Method could not be applied from this valuation analysis to ensure accuracy and adherence to valuation principles.
  - ii. However, we have considered market price under Market Approach, which is as per Regulation 164 (1) for frequently traded shares, the floor price of the equity shares to be allotted pursuant to preferential issue shall be higher of 90/10 trading days' volume weighted average price (VWAP) of the scrip preceding the relevant date. Actively Traded Market Price is computed based on trading data on NSE being most actively traded platform the for the equity shares of the subject company.
- c. Under Income Approach Kindly refer to explanation as per point 1 above.

Thus, we have allocated equal weightage to applicable methods i.e., Asset Approach (NAV) & Market Approach (CMM). Estimated Weighted Fair Value of Equity Share of Rs 30.20/ equity share.

Conclusion - Such weighted fair value of equity share being lower than Actively Traded Market Price of Rs 32.14 / equity share as per Regulation 164 (1) - for frequently traded shares, the floor price of the equity shares to be allotted pursuant to preferential issue is Rs 32.14 / share being higher.
